LANGUAGES

- Cairo
- Kotlin
- Solidity
- Rust
- Clarity
- TypeScript / JS
- Python · CosmWasm

CHAINS

- Starknet
- Ethereum · Base
- Solana · Sui
- Vara · Quai · Kaspas

MOBILE

- Android (Kotlin)
- Kotlin Multiplatform
- iOS via KMM

EXPERTISE

- Smart Contract Dev
- Contract Security
- Wallet Architecture
- Privacy Infrastructure
- API Integrations
- Dev Tooling
- Technical Writing

The work is the identity.

Lord4T6

Building tools that make blockchain easier to use, understand, and interact with.

I build things that make blockchain feel less like fighting software and more like it simply works. Every product starts from the same idea, "find what's making blockchain harder than it needs to be, for the people using it and the developers building on it, and remove it." That focus on simplicity is what drives everything I ship.

Selected Products

VERTEXHIVETECH — FOUNDER & LEAD DEVELOPER

Vasp [Starknet] [Cairo] [STRK20]

- Payments, payroll, and private transfers on Starknet — built so moving value on-chain takes a link, not a custodian or a workaround.

VH Wallet [Android Kotlin] [KMM]

- A multi-chain wallet, live on Android testnet with Quai Network support, so users aren't stuck juggling a separate app for every chain they touch.

TokenHive [Starknet] [Cairo]

- An on-chain token registry for Starknet, so any project can be discovered and verified by its metadata alone
- no liquidity required just to be found.

INDEPENDENT BUILDS

Bullish Meme Bot [Automation]

Builder

- Automated growth engine for Web3 communities that don't have the time to manually drive engagement around every launch.

Private Solana Bots [Solana]

Builder

- Automation for on-chain alerts and trade pipelines, built so tracking activity across Solana doesn't require watching the chain by hand.

Hackathons

YetiScan · Clay Hackathon [Sui]

Onyx · Vara Network A2A Hackathon [Vara]

LaunchOS · OKX Marketplace Agent

Guardiee · Bitget Agent Hub Challenge

Ecosystem Presence

Active Starknet contributor, developer discussions, privacy tooling feedback, and early engagement with STRK20 build tooling and privacy pool infrastructure. Bootstrapping through ecosystem grants and hackathons. Also created an open android github repo for Kotlin developers building on quai.
